OVERVIEW

Computer Engineering student at Prince of Songkla University with hands-on experience leading backend development and delivering full-stack systems in production environments. Skilled in API design, asynchronous processing, and cloud-based architectures. Seeking a Software Engineering internship to build scalable systems and deliver impactful technical solutions.

EDUCATION

Bachelor of Engineering in Computer Engineering 2023 - 2027 (Expected)
Prince of Songkla University GPA: 3.66

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Frontend: React, Next.js
Backend: Node.js, NestJS
Database: PostgreSQL, Redis
Infrastructure: Docker, S3-compatible storage (MinIO), Google Cloud
Core: REST APIs, System Design, Distributed Systems, Asynchronous Processing, Message Queues

PROJECTS

Enterprise Digital Archive Platform (Archives BIA) | [Live](#) Aug 2025 - Present

- Led backend development as team lead, coordinating architecture decisions, codebase conventions, and task delegation across the engineering team.
- Built a fault-tolerant document ingestion pipeline with async job queues (BullMQ/Redis), eliminating 504 Gateway Timeouts and supporting batches of 100,000+ files.
- Architected REST APIs and ISAD-G schemas with PostgreSQL Materialized Views to optimize recursive tree query latency.

Wise Review Platform (Image Review & Gallery Web App) | [Live](#) Feb 2025 - Oct 2025

- Built a masonry-style image gallery with lazy loading and skeleton screens, optimizing perceived performance for large image datasets.
- Implemented image preview modal and gallery detail view with smooth transitions using Framer Motion.
- Integrated tRPC with full TypeScript type-safety for client-server API communication, eliminating runtime type errors.

Web3 Archive Platform (Sui / Ivory) Nov 2024 - Jan 2025

- Developed Web3 wallet auth and SuiNS domain management via @mysten/dapp-kit and Sui SDK, enabling on-chain CRUD operations.
- Built the main dashboard surfacing live blockchain state, real-time deployment status, and Walrus blob data via REST APIs and direct SDK calls.
- Architected a shared component library (Radix UI + TailwindCSS) standardizing UI patterns across a 3-person frontend team.

ACHIEVEMENTS & ACTIVITIES Mar 2024 - Nov 2025

- Top 5** - Huawei ICT Competition 2025 (Network Track, National Final)
- 6th Place** - Thailand Cyber Top Talent 2025 (Final Round)
- Participant** - ICPC Thailand National Round (2024-2025)
- 1st Runner Up** - PSU Open API Contest 2024
- Event Organizer** - Barcamp Songkhla 9 & 10
